

GIRONA 500 AUV

GIRONA UNDERWATER
VISION AND ROBOTICS

GIRONA 500

AUV

Features

The Girona 500 is a compact and lightweight autonomous underwater vehicle with hovering capabilities, which can fulfill the particular needs of any application by means of mission-specific payloads and a reconfigurable propulsion system.

Vehicle specifications

| | |
|-----------------------------------|--|
| Height: | 1 m |
| Width: | 1 m |
| Length: | 1.50 m |
| Hull diameter: | 0.3m |
| Weight in air: | from 140 kg |
| Maximum depth: | 500 m |
| Energy: | 2.2 kWh Li-Ion battery cluster |
| Endurance: | > 8hrs (Dependent on speed, payload and propulsion system configuration) |
| Propulsion system configurations: | from 3 thruster (3DoF) to 8 thruster (fully actuated). |
| Tracking: | emergency transponder. |

Standard Sensors

- Doppler velocity log
- Attitude and heading reference system
- Fiber optic gyro (heading)
- GPS
- Ultra short base-line
- Dual frequency profiling sonar
- Sound velocity sensor
- Pressure gauge
- Sidescan sonar
- Video Camera system + LED lighting

Payload

- 35 liters volume available for mission specific equipment.
- Ethernet and RS - 232 interfaces with the vehicle
- Regulated 24V@10W

Communications

- WiFi
- Acoustic modem
- Tether (optional ROV mode)

Navigation

- GPS position on surface
- Inertial (DVL / FOG-AHRS)
- Absolute positioning (USBL / GPS / AHRS)
